SITUATION SUMMARY

Post-Tropical Cyclone Marie, High Surf Event, Impact to Southern California (Final)

- On 8/29/14 as of 0200 hours, the National Hurricane Center (NHC) downgraded Tropical Storm Marie to a Post-Tropical Cyclone due to maximum sustained winds decreasing to near 40mph extending outward up to 125 miles from the center.
- The NHC is forecasting that swells generated by Post-Tropical Cyclone Marie are expected to gradually subside in Southern California as the storm weakens over the next 48 hours; however, life-threatening surf and rip current conditions are still likely as a result of these swells. There are no coastal Watches or Warnings in effect.

Orange County

- The Seal Beach Pier is closed due to one pier failure, unknown when it will be repaired. Inspections will continue when it is safe for boats to go under the pier.

Ventura County

- No additional damages reported.

Los Angeles County

- Long Beach harbor suffered some damage to the breakwater, a road and some water mains. They are managing the issues with local resources.

There are currently no AFN issues and no requests for State assistance.

This will be the final report.

SITUATION SUMMARY

Magnitude 6.0 Earthquake, American Canyon, Napa County

SITUATION UPDATE:

On Sunday, August 24, 2014, at 0320 Hours PST, a magnitude 6.0 earthquake struck five miles northwest of American Canyon, CA. The earthquake nucleated at a depth of 10.8km. The shaking intensity in American Canyon and Napa from the “South Napa Earthquake” was a “VII” on the Modified Mercalli Scale, suggesting very strong shaking occurred in the Napa County area. Ground shaking was felt as far south as Salinas, east to Sacramento, and north to Ukiah. USGS estimates that aftershocks should be expected for the next week. The Cal OES Earthquake and Tsunami Duty Officer is in contact with the United States Geological Survey and California Geological Survey and will provide updates.

Aftershocks:

As of 08/29/14 at 0820 hours, there have been 109 aftershocks, four of which are M3.0 or greater (Source: USGS).

Aftershock Probability Report:

At this time (5 days after the mainshock) the probability of a strong and possibly damaging aftershock in the next 7 days is less than 10%. Most likely, the recent mainshock will be the largest in the sequence. However, there is a small chance (approximately 2%) of an earthquake equal to or larger than this mainshock in the next 7 days. In addition, up to 10 small aftershocks are expected in the same 7-day period and may be felt locally. This will be the final aftershock report unless the situation warrants an update.

Area Weather Forecast

Quiet weather is expected across the San Francisco and Monterey Bay Region all work week.

Access and Functional Needs

- Members of the Functional Assessment Service Team (FAST) have joined the American Red Cross's Integrated Care Teams, to provide disability expertise.
- Local Assistance Centers (LAC) will need to be accessible, including bus routes to facilities for individual's who don't drive. The Cal OES Office of Functional Needs (OAFN) offered assistance if needed.
- The Coastal REOC can provide laptops to LAC's to assure communication for anyone who is deaf and uses sign language interpreters and for those with Limited English Proficiency needing other language interpreters.
- In recovery planning, OAFN advised that disability related access fixes (i.e., ramps, grab bars) should be included as an eligible expense when using CDBG or other funding sources.
- The City of Napa has updated their website to include advisories and information regarding water supplies and usage. PG&E will continue courtesy checks for residents.

WEATHER

WEATHER SYNOPSIS BY REGION:

NORTHERN CALIFORNIA AND CENTRAL COASTAL AREAS:

Eureka Weather:

An upper trough approaching from the northwest will bring a cooling trend to the North Coast through Saturday. Another warming trend will occur during the first half of next week. Overnight and at least morning clouds will continue to impact coastal locations into next week.

San Francisco Weather:

Normal to slightly above normal temperatures and dry weather will persist through the holiday weekend.

CENTRAL CALIFORNIA AND SOUTHERN SAN JOAQUIN VALLEY

Sacramento Weather:

Dry weather is forecast to continue for the next week. Warm temperatures to continue today, with a gradual cooling trend expected into the middle of next week.

Hanford Weather:

High pressure will remain over Central California for one more day resulting in clear skies and slightly above average temperatures. Dry and weak trough will move through beginning late Friday bringing slight cooling over the weekend.

WEATHER

WEATHER SYNOPSIS BY REGION:

SOUTHERN CALIFORNIA

Los Angeles Weather:

High pressure will continue the above normal temperatures through Saturday. Gusty northwest winds are expected tonight through Saturday night for the Santa Barbara area. Increasing onshore flow and a weak trough are expected to bring a cooling trend by Sunday and continue through next week.

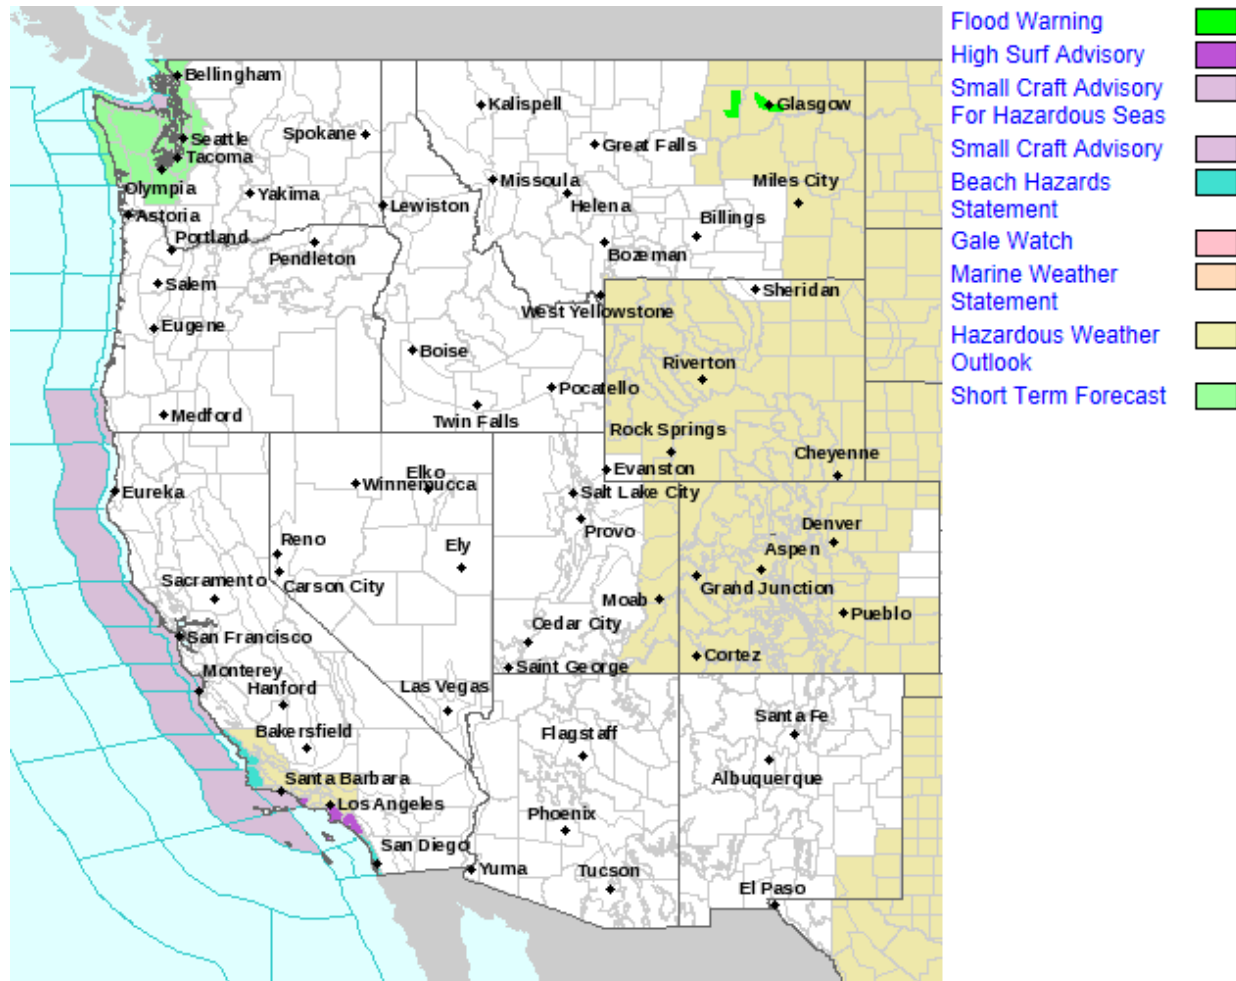

Extreme Southwestern California Including Orange, San Diego, Western Riverside and Southwestern San Bernardino Counties:

Surf will gradually subside today along favored southwestern California beaches. High pressure aloft will begin to weaken later today allowing some cooling over coastal areas, but it will remain quite warm inland. A broad low pressure trough developing across the west will bring additional cooling and a return of marine clouds over the holiday weekend. Dry, with near normal late summer conditions to start out September becoming cooler through the week as a low pressure trough settles over the East Pacific.

Southeast California Weather:

A pleasant end of summer holiday weekend is in store with dry weather, occasional breezes and above normal temperatures expected.
